

## Mould Awareness & Level 1 Mould Worker Training

### Course Overview & Scope

The presentation provides an overview of how mould develops, the conditions that cause it, and why it can significantly impact indoor air quality. It summarizes the health effects of mould exposure, key regulations and guidelines, and common assessment methods. The training also outlines safe practices for small-scale (Level 1) mould remediation, including PPE, cleaning techniques, and proper material removal. Additional context is provided on water damage standards, infection control in sensitive environments, and related

### Course Outline

In this course you will learn about:

- Common causes of indoor mould growth
- Health effects and sensitive populations
- Regulations and guidelines (Health Canada, OHS, Public Health)
- Testing methods and basic interpretation
- Level 1 mould abatement: planning and safe removal steps
- Overview of IICRC water loss categories, infection control concepts, and designated substances
